### **CROSS-PLATFORM TOOL CARRYING ERGO RIGS ARE MODULAR The weight of hand tools, instruments and devices carried the smart way.**

**Grand Rapids, MI** (September 2009) – Duckbill LLC is a premium manufacturer of stable, comfortable, high performance occupational carrying rigs and modular carrying gear designed, engineered and built on the principles of comfort, ergonomics, safety, choice and maximum functionality. These core principles can move between platforms.

In work situations where hand tools are always required but fall protection isn't there's always been a question about how best to integrate fall protection compliance while wearing tool belts. Wearing a tool belt under the harness is inconvenient and risks secondary trauma in the event of a fall. Wearing a tool belt over the harness risks harness failure or premature wear due to tool belt abrasion on harness webbing. Which one is the priority: tools or safety?

Duckbill's heavy duty MobilityMax™ platform and the over 150 rugged, interchangeable, lightweight , tool carrying modules eliminates the priority problem head on. The company's MaxCon™ module docking technology allows any combination of more than 150 tool-carrying modules to be docked on or off, and exchanged or repositioned anywhere on the harness. Importantly, the tool belt portion of the MobilityMax™ rig can easily be undocked from the fall protection harness and worn as an ergonomic tool belt. The cross-platform transition is that easy and straightforward.

Duckbill technology makes possible an industrial strength, purpose-specific tool carrying solution that's a truly functional, ergonomic and comfortable way to meet everyone's expectations for productivity and safety.

## About Duckbill LLC

Duckbill is a leading designer and manufacturer of personal, body-borne ergonomic carrying gear for Industry, Law Enforcement as well as Outdoors users. All of Duckbill's gear incorporates its proprietary Max-Con™ docking technology that allows each user to benefit from an ergonomic carrying solution that each user customizes to meet the weight distribution and the position of access criteria that best suit their individual or organizational needs. This allows each wearer to customize, and customize again if preferred, to adjust the fit and functionality of the gear to match size, frame, gender or the tool and task mix at hand one time, or any time.

Duckbill is based in the United States and Canada and designs, engineers and manufactures all of its gear in either of those two countries.
